# PREDICTING CUSTOMER BUYING BEHAVIOUR

Data Science Job Simulation | Task 2

**Pranav Bhawane**

# RESULTS

## Evaluation

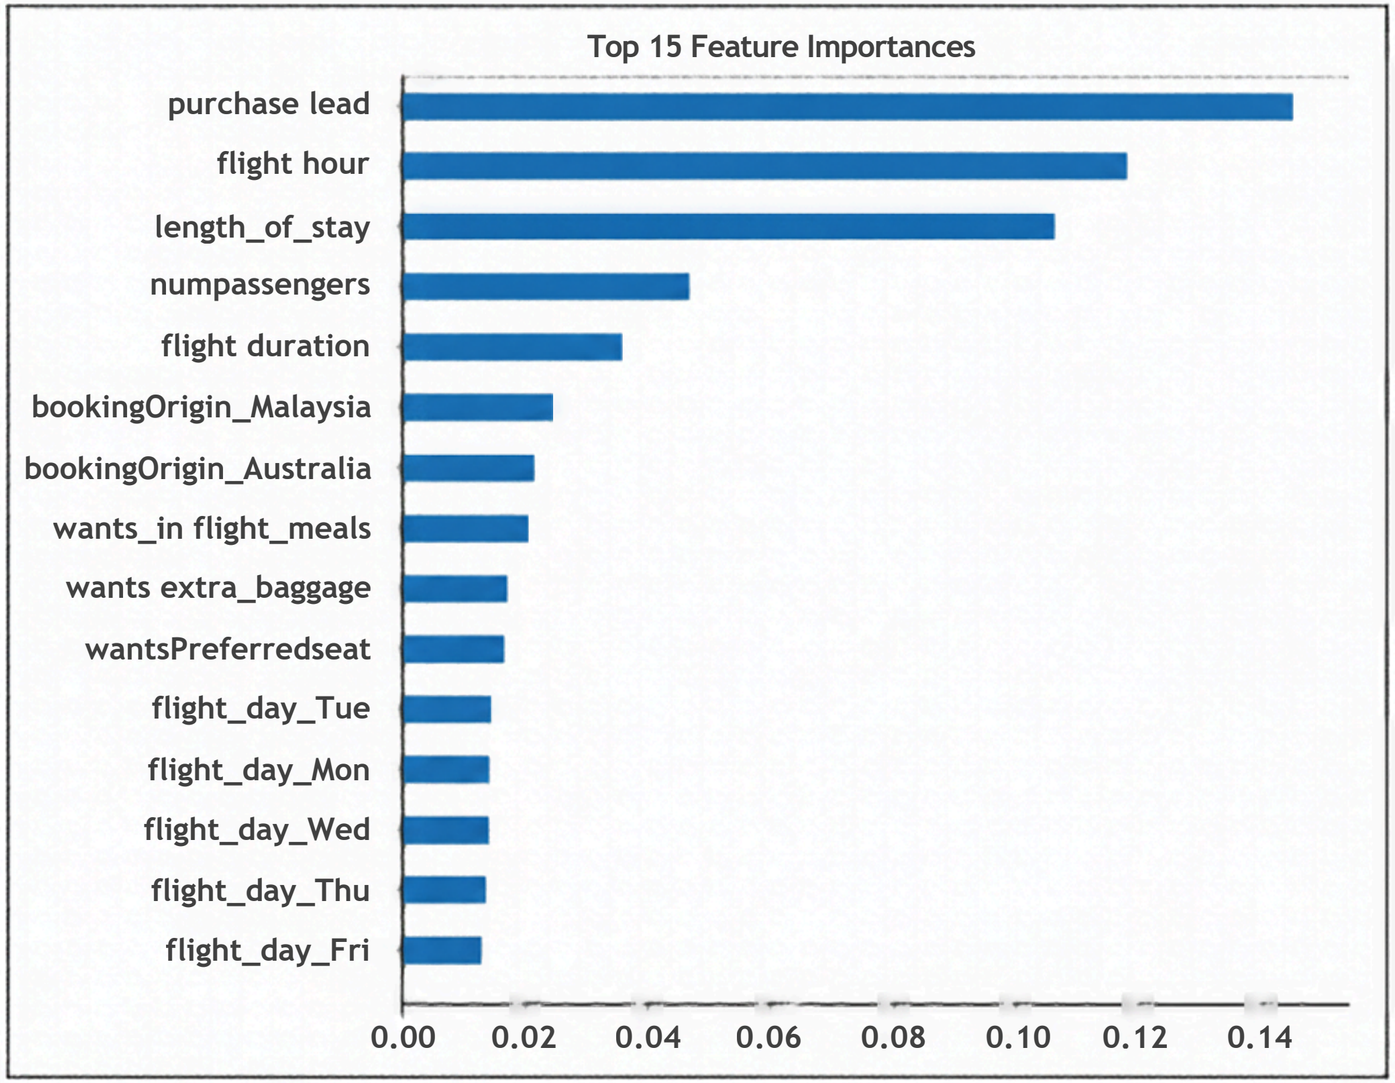

purchase lead is the most important feature in the Random Forest model.

flight_hour and length_of_stay are also among the strongest features.

numPassengers and flight duration contribute to the model's predictions.

The chart also shows contributions from selected booking-origin categories, customer preferences, and flight-day categories.

These importance scores describe the model's predictive behaviour; they do not prove that a feature causes booking completion.

**BUSINESS IMPLICATION**

British Airways could investigate how booking lead time, flight timing, length of stay, and passenger count relate to booking completion, then test targeted improvements using controlled experiments.
